

You can use the Engineering Design Process

You can use the Engineering Design Process to create new inventions that solve problems.

Step 1	<p>Think and Define Recognize the problem or design opportunity.</p> 
Step 2	<p>Learn Read, explore, and talk to people to gain the knowledge you need to solve your problem.</p> 
Step 3	<p>Try Try stuff, build stuff, see what happens, experiment, make observations.</p> 
Step 4	<p>Improve Remember what didn't work well and try again. Make your solution better.</p>
