## U3-2.2b Challenge up: Share your comments

### What to do

You will need at least one partner for this activity.

Design and write a program in EdScratch. Keep your program a secret from your partner!

What your program does is up to you. Be sure to include comments to help keep track of what it is you are trying to do and help someone else read your program.

Once both you and your partner have finished writing your programs, swap with each other.

Without running the program in Edison, can you understand your partner's program by reading their code and comments? Can your partner understand your program and comments?

1. Pretend that you are in charge of making the rules for how everyone should use comments in EdScratch. What rules should everyone follow then they use comments so that the comments are helpful and easy to understand? Work together with your partner to decide the new rules for using comments.

### Hint!

You can use activity U3-2.2a as inspiration for what to include in your program.
